PROFILE SUMMARY

Final-year Computer Science undergraduate with hands-on, self-driven experience across the DevOps toolchain — Linux administration, Bash scripting, AWS cloud infrastructure, containerization with Docker, and orchestration with Kubernetes. Comfortable working independently to design, build, and deploy infrastructure end-to-end. Strong problem-solving foundation with 200+ DSA problems solved on LeetCode. Seeking an entry-level DevOps role to apply and grow these skills in a production environment.

TECHNICAL SKILLS

Operating Systems: Linux (Ubuntu) — file systems, permissions, process management, networking basics

Scripting: Bash Scripting — automation of routine administration and deployment tasks

Cloud (AWS): EC2, VPC (subnets, routing, security groups), Elastic Load Balancing (ALB), Auto Scaling Groups

Containers: Docker — building custom images, managing containers, pulling/pushing to Docker Hub

Orchestration: Kubernetes — Deployments, Services, ConfigMaps/Secrets, multi-container application setups

CI/CD: Working knowledge of CI/CD concepts; basic hands-on exposure to Jenkins (freestyle jobs, build automation)

Version Control: Git & GitHub

Databases: MongoDB (deployment & configuration on Kubernetes), PostgreSQL

PROJECTS

AWS Cloud Infrastructure Setup (EC2, VPC, Load Balancing, Auto Scaling)

Designed a custom VPC with public and private subnets, route tables, and security groups to isolate application tiers.

Deployed application servers on EC2 instances behind an Application Load Balancer for traffic distribution.

Configured an Auto Scaling Group to automatically scale EC2 capacity based on load, improving fault tolerance and availability.

MongoDB Deployment on Kubernetes

Deployed MongoDB and Mongo Express on a Kubernetes cluster using Deployment and Service manifests.

Managed application configuration and credentials securely using Kubernetes ConfigMaps and Secrets.

Exposed Mongo Express via a Kubernetes Service to enable browser-based database administration.

Application Containerization with Docker

Built and optimized custom Docker images for sample applications using Dockerfiles.

Managed image versioning and distribution by pushing/pulling images to and from Docker Hub.

Practiced containerizing multi-service applications to prepare for orchestration with Kubernetes.

Explored basic Jenkins freestyle jobs to automate Docker image builds as an introduction to CI/CD workflows.

EDUCATION

Bachelor of Technology (B.Tech) — Computer Science & Engineering

JSS Academy of Technical Education, Noida | 2023 - 2027

ACHIEVEMENTS & ADDITIONAL INFORMATION

Solved 200+ Data Structures & Algorithms problems on LeetCode, demonstrating strong problem-solving and analytical skills.

Actively share DevOps learning, project updates, and technical notes on X (Twitter).

Self-taught across Linux, AWS, Docker, and Kubernetes through hands-on personal projects and documentation-based learning.
