PROFESSIONAL SUMMARY

Final-year B.Tech CSE student specializing in AWS cloud-native architecture and DevSecOps CI/CD pipelines. Skilled in Jenkins, Docker, Kubernetes, Trivy, and Terraform for Infrastructure as Code, with hands-on experience deploying secure, highly available AWS architectures and monitoring/observability stacks (Prometheus, Grafana). Seeking a DevOps/Cloud internship role.

TECHNICAL SKILLS

Cloud: AWS (EC2, VPC, ALB, Auto Scaling, RDS, IAM, S3, Lambda, CloudWatch)
Containers: Docker, Kubernetes
CI/CD & IaC: Jenkins, Terraform
Observability: Prometheus, Grafana, Alertmanager
OS & Scripting: Linux, Bash
Version Control: Git, GitHub
Database & Security: PostgreSQL, Trivy
Programming: Java, Spring Boot, Node.js, REST APIs

PROJECTS

NovaPay Bank API – DevSecOps CI/CD, Kubernetes & Monitoring **GitHub**

Java 21, Spring Boot, Jenkins, Docker, Trivy, PostgreSQL 16, Kubernetes, Prometheus, Grafana, Alertmanager, AWS EC2, Linux, Bash

- Built a Jenkins Declarative Pipeline automating test, Maven build, Docker packaging, Trivy scanning, Docker Hub publishing, and Kubernetes deployment for a Spring Boot + PostgreSQL REST API, triggered on GitHub commits.
- Enforced Trivy as a HIGH/CRITICAL vulnerability gate; identified and remediated 3 HIGH-severity OpenSSL CVEs via base-image upgrades.
- Deployed to Kubernetes (Deployments, Services, ConfigMaps, Secrets, PVCs) with an HPA autoscaling 2–5 replicas at 70% CPU; validated scaling under controlled load.
- Instrumented the app with Prometheus + Micrometer, built Grafana dashboards for JVM/HTTP/pod metrics, and configured Alertmanager to route HIGH-CPU alerts via SMTP.
- Provisioned AWS infrastructure (EC2, VPC, subnets, security groups) and resolved Maven/Trivy permission failures via UID/GID matching, eliminating pipeline reliability issues.

AWS Three-Tier Web Architecture **GitHub**

AWS, EC2, VPC, ALB, Auto Scaling, RDS

- Designed and deployed a highly available three-tier web architecture on AWS, separating web, application, and database layers.
- Configured a custom VPC with public/private subnets, route tables, IGW, NAT Gateway, and Security Groups for secure network segmentation.
- Deployed the application on EC2 instances behind an Application Load Balancer (ALB) with Auto Scaling Groups to improve availability and fault tolerance.
- Integrated Amazon RDS as the managed database layer, isolating it within private subnets and restricting tier-to-tier traffic through security group rules.
- Documented the complete deployment with architecture diagrams and published source code on GitHub for reproducibility.

AWS EBS Snapshot Cost Optimization **GitHub**

AWS, Lambda, CloudWatch, IAM, Bash

- Designed and implemented an automated AWS EBS snapshot cost-optimization solution to identify orphaned and unnecessary EBS snapshots.
- Developed an AWS Lambda function to automatically identify and delete eligible snapshots based on defined cleanup criteria.
- Configured Amazon CloudWatch to schedule and monitor the automated snapshot cleanup workflow.
- Implemented IAM least-privilege policies for secure Lambda, EBS, and CloudWatch operations.
- Documented the architecture, automation workflow, and infrastructure configuration in GitHub.

EDUCATION

B.Tech in Computer Science & Engineering 2023 – 2027
JSS Academy of Technical Education, Noida CGPA: 7.87/10

Senior Secondary (10+2) 2020 – 2022
Vidyawati Nigam Memorial Public School, Banda 88.00%

ACHIEVEMENTS

- Selected as Student Placement Coordinator (2026–2027), liaising between recruiters and students.
- Solved 150+ Data Structures & Algorithms problems on LeetCode.
- Completed a hands-on Terraform/IaC project series. **GitHub**
